

## ADVANTAGES

- High availability and reliability
- Better fuel efficiency leads to lower CO2 emissions per MWh, when using EPA grades
- Hydrophobic EPA grades limit degradation such as fouling and corrosion
- Suitable for harsh environments
- Static air filter with long filter life and lower initial and stable pressure drop
- Lightweight construction for easy mounting
- Fully incinerable

<b>Application</b>	All installations where safety/reliability is important. All installations with high humidity/heavy rain Pre- or final filter for gas turbines, large industrial air compressors, diesel & gas engines, generators & enclosures, wind turbines
<b>Frame</b>	Plastic molded;ABS
<b>Gasket</b>	Polyurethane, endless foamed
<b>Media</b>	Glass fiber
<b>Separator</b>	Hot-melt
<b>Sealant</b>	Polyurethane
<b>Grille, Downstream</b>	Support grid for filtermedia
<b>Rec. final pressure drop</b>	600 Pa
<b>Max airflow</b>	1.3 x nominal flow
<b>Max Temperature (°C)</b>	70°C
<b>Relative Humidity max</b>	100%
<b>Installation Options</b>	In a separate bank, from the upstream or downstream sides. Can be close-coupled in a reverse-flow configuration

## Comment

Additional product features:  
 Hydrophobic filter construction and media  
 High filtration efficiency (up to H13)  
 Original vertical pleats with interrupted hot melt separator  
 Sealed on all sides and featuring our patented double sealing process  
 Resistant to turbulence and extreme pressure drop  
 High burst strength >6250 Pa (>25")  
 Solid HEPA frame eliminates air bypass  
 Patented aerodynamic support grid for lower pressure drop  
 Optimized media area for the low pressure drop at EPA efficiency  
 Low operational pressure drop, even when wet, with patented built-in drainage  
 Available in a reverse-flow configuration  
 XL version is available on request.  
 Reverse flow version: With support metal grid available on request  
 Also available in 1/2 and 3/4 size on request.

CamGT 4V-300 is a high efficiency air inlet filter used for second and/or third stage filtration, depending on the gas turbine air inlet system. Typical range from M6 or MERV 11 up to E12 (EPA level), for the best gas turbine protection. Also available in versions with Reverse flow, half-size and 3/4 size on request.
